SUMMARY

Backend Developer with **4 years** of hands-on experience in **Go and Python**. Passionate about building scalable systems, optimizing performance, and delivering clean, maintainable backend solutions.

EXPERIENCE

Go Backend Developer

Nov 2025 – Present

VK

Hybrid

- Building a high-load A/B testing platform handling **1M+ RPS**, enabling real-time experiment evaluation at scale.
- Developed an end-to-end pipeline for deploying A/B experiment configurations, ensuring reliable and consistent rollout across services.

Go Backend Developer

Jan 2025 – Nov 2025

Yandex.Pay

Moscow, Russia

- Designed and implemented a loyalty program granting one month of Yandex Plus to users after their first offline QR payment in the Kaluga region, leading to **~15 QR payments per hour** at launch.

Python/Go Backend Developer

Oct 2022 - Jan 2025

Yandex.Billing

Moscow, Russia

- Developed a dry-run mode for Yandex.Direct (**~80M DAU**) integration, simulating **100% load on billing components** for thorough validation without impacting live processes.
- Designed a backend solution to prevent personal data exposure across Yandex services — with Yandex Market (**19M+ active buyers**) representing a major share — using advanced anonymization techniques to ensure compliance with data protection regulations. (team of 3)
- Refactored a monolithic application into two Go microservices for distinct billing entities, enabling **daily deployments** and improving modularity and scalability. (team of 3)
- Implemented seamless delivery of personal accounts and contracts via Kafka, automating Yandex Taxi's billing process and improving system reliability and real-time data synchronization across services — **reducing manual operations by 40%** and enhancing user experience for millions of drivers.

Intern Backend Developer

July 2022 – Oct 2022

Yandex.ABC

Moscow, Russia

- Designed an automated tracking system to monitor GPU resource allocation; led to identification of underutilized resources, optimizing usage patterns by reallocating 20% more capacity toward critical workloads without additional investment.
- Developed backend for duty service inside Yandex +10k engineers.

EDUCATION

Bachelor of Computer Science, Innopolis University

2020 - 2024

Relevant coursework: Distributed Systems, Algorithms and Data Structures, Database Systems, and Software Engineering

PROJECTS

Whoelse — Platform to find SaaS competitors and alternatives. Built with React & Python (**30 sign-ups on launch**).

Cavora — AI tool improving YouTube learning retention. React & Python.

AYZ Focus — Pomodoro-based time tracker in React Native & Go (**16 daily users**).

Vendera POS — POS system for Thai retailers in Next.js & React Native (**used by 3 stores, 50k+ THB processed**).

Lagom CGI — Website for top **CIS CGI studio** (clients: RedBull, Yandex, Dubai Gov). Built with team of 4.
