EDUCATION

Bachelor of Computer Science, Innopolis University

2020 - 2024

EXPERIENCE

Go Backend Developer

Yandex.Pay

Jan 2025 – Present

Moscow, Russia

- Designed and implemented a loyalty program granting one month of Yandex Plus to users after their first offline QR payment in the Kaluga region, leading to ~15 QR payments per hour at launch.

Python/Go Backend Developer

Yandex.Billing

Oct 2022 - Jan 2025

Moscow, Russia

- Developed a dry-run mode for Yandex.Direct (~80M DAU) integration, simulating 100% load on billing components for thorough validation without impacting live processes.
- Designed a solution to prevent exposure of personal data through advanced anonymization techniques, ensuring compliance with data protection regulations. (team of 3)
- Refactored a monolithic application into two Go microservices for distinct billing entities, enhancing modularity, scalability, and deployment speed. (team of 3)
- Established seamless delivery of personal accounts and contracts via a message broker, improving reliability and real-time data synchronization across services.

Intern Backend Developer

Yandex.ABC

July 2022 – Oct 2022

Moscow, Russia

- Designed an automated tracking system to monitor GPU resource allocation; led to identification of underutilized resources, optimizing usage patterns by reallocating 20% more capacity toward critical workloads without additional investment.
- Developed backend for duty service inside Yandex

PROJECTS

Whoelse A platform to discover product alternatives instantly, helping users quickly compare competitors and find the best options. Built with React and Python (**30 sign-ups on launch day**).

Cavora An AI-powered tool designed to improve YouTube learning retention by analyzing videos and suggesting personalized learning enhancements. Built with React and Python.

AYZ Focus A time-tracking application inspired by the Pomodoro technique, helping users manage work sessions efficiently. Developed using React Native and Go (**16 daily active users in a small community**).

Vendera POS A point-of-sale system tailored for Thai businesses, streamlining retail operations with a seamless interface. Built with Next.js and React Native (**connected to 3 retail businesses, generating over 50k THB in total revenue**).

Lagom CGI A CGI studio website I built with a team of 4. The studio ranks among the **top 5 CGI studios in the CIS** producing short-form content for clients such as RedBull, Yandex, and the Dubai Administration.
